

FIREWALL SERVICES

THE GCX APPROACH

GCX is aware of the transition to a digitised world means that staff have access to all possible solutions and platforms, opening the doors to a wide assortment of risks. The firewall remains an important part of the cyber defence toolkit, but it needs to be smarter than ever to keep up with a moving attack surface. With ever-evolving technology, our dedicated team of security experts can protect your most important assets, 'the crown jewels'.

As security threats become more sophisticated, organisations need to reassess their defences. Cybersecurity is primarily about securing strong boundaries around the network. Now it is a more fluid and changing landscape. Internet-based threats are becoming progressively difficult to manage. Everyone knows that data breaches can lead to loss of data, sales, brand reputation, and customer loyalty. So how would you control the moving target? Start by saving yourself the hassle and risk of in-house or DIY firewall implementation. We can provide you with solutions anywhere in the world with complete service start-up. Our managed firewall security supports you with a dedicated team of security experts and evolving technology to protect your most important assets.

No matter where you do business, we can tailor our support to your needs. Depending on your firewall model, you can choose the next-generation firewall features, cloud or on-prem firewalls or microsegmentation services. You are in control of your security policy, we help define it and ensure it is properly implemented and maintained. Our security experts can proactively manage your firewall 24/7 and provide you with detailed reports on system health and attack history. If something goes wrong in the field, our SOC will support you every step of the way.

Design, Build, Manage

We handle the entire design, deployment and configuration process, ensuring your firewall is set up correctly and optimized for your specific needs. Moreover, our team of security experts monitor your firewall around the clock, proactively identifying and mitigating threats.

Multiple Options

Whether its cloud based or on premise firewalls, utilized them as a secure perimeter or as the network edge devices for a SASE solution, we can deliver them all.

Microsegmentation Solutions

In line with updated compliance standards, GCX have a number of microsegmentation solutions, based around enforcing zero trust policies to segment functional areas within your business. GCX provide pre-design consultancy, and design, build and management of microsegmentation solutions.

Industry-leading protection against new and dynamic threats

Full protection against threats with real-time scanning of inbound and outbound web traffic, blocking known and zero-day threats before they reach your network. We bring you the best technology to help future-proof your investment and maximise your protection. Likewise, we keep your firewall up-to-date with the latest security patches and firmware updates, ensuring optimal protection. Our service can meet the needs of all sizes of organisation – from those using simple internet links, through to large-scale WAN infrastructures.

Scalability Experts on hand

GCXmanage the security policy across your entire network through a single centralized portal. Further, as experts in networking, our knowledge and insights go well beyond Firewall management providing support into networks and broader aspects of cyber security.

Improved productivity

Reduce downtime and prevent unproductive applications from running on your network.

Proactive monitoring

From our SOC we provide a centralised monitoring of your firewall estate, giving you the information, you need to respond proactively.

WHY CHOOSE GCX?

GCX provide a flexible range of global services that can be as simple as assisting you to deliver and support your own self-build network through to providing a fully managed outsource service. Our solutions are backed by a team of expert consultants who can assist on every step of your data journey, whether it is design concerns like resilience or security, OEM and carrier selection, deployment, and management we are there all the way with approaches that adhere to best practices and are standards led wherever possible.

Our global presence ensures that we can deliver and support whenever, wherever.
