

GNSX

THE CHANGING FACE OF ENTERPRISE NETWORKING.

THERE IS AN OLD SAYING IN MANAGED IT SERVICES THAT SAYS, "IT NETWORKS ARE INVISIBLE UNTIL THEY GO WRONG."

As network and security experts; the team at GCX had the idea of changing that - what if network visibility empowered you and your business to understand fully what all your users were doing, how the data flows across your network, how those flows affect user experience and whether the data is secure, compliant or compromised; what if we could deliver the performance benefits of a private network alongside the price and flexibility of a public network all whilst saving you money?

GCX recognises our customers are facing challenges in delivering a quality end user experience while at the same time reducing costs, ensuring data is secure, and improving efficiency - which is why GCX has developed a new product concept called GNSX.

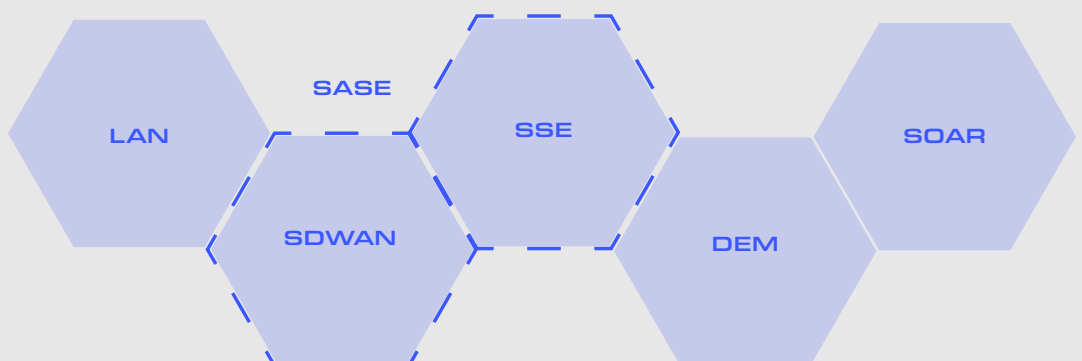

WHAT IS GNSX?

GNSX is a suite of solutions covering everything from user and device security to advanced analytics, automation, and SOAR capabilities. Each solution can operate independently or integrate with others, forming a powerful, unified GNSX stack. The GNSX approach enhances security through improved data analysis and reduces costs by eliminating redundant functionalities that are inherent in stitching together different vendor solutions.

Start with a single solution and seamlessly integrate others over time, building a comprehensive, cohesive security stack. Or, simply utilize the robust standalone capabilities of each individual component. GNSX empowers you to control your network and security journey.

THE GNSX ECOSYSTEM:

KEY FEATURES & BENEFITS:

Modular & Flexible:

Purchase and integrate solutions as needed, building your ideal security stack at your own pace.

Multi-Vendor Support:

Based on three major OEM vendors, GNSX integrates with your existing infrastructure and preferred technologies.

Single Pane of Glass Management:

Centralized visibility, analytics, and reporting across your entire network and security ecosystem.

Experience Level Agreements (XLAs):

Focus on application performance and user experience, replacing traditional, less relevant SLAs. XLAs measure how your customers actually access applications, not just proxy network metrics like availability or latency.

Comprehensive Solution Stack:

GNSX can encompass LAN, SD-WAN, SSE (SASE), DEM, and SOAR, providing a complete, end-to-end solution.

Cost Optimization:

Avoid overlapping licenses and functionalities, maximizing your investment.

Agile & Scalable:

Rapid feature deployment and integration allow you to adapt quickly to changing business needs.

Bring Your Own Network (BYON):

Leverage existing network hardware and infrastructure while enjoying the benefits of a cutting-edge solution.

Seamless Integrations:

Integrates with ServiceNow, SIEM, and SOAR platforms for enhanced observability and control.

Single Contract & Simplified Management:

One contract covers both networking and security services, streamlining administration and simplifying your vendor relationships.

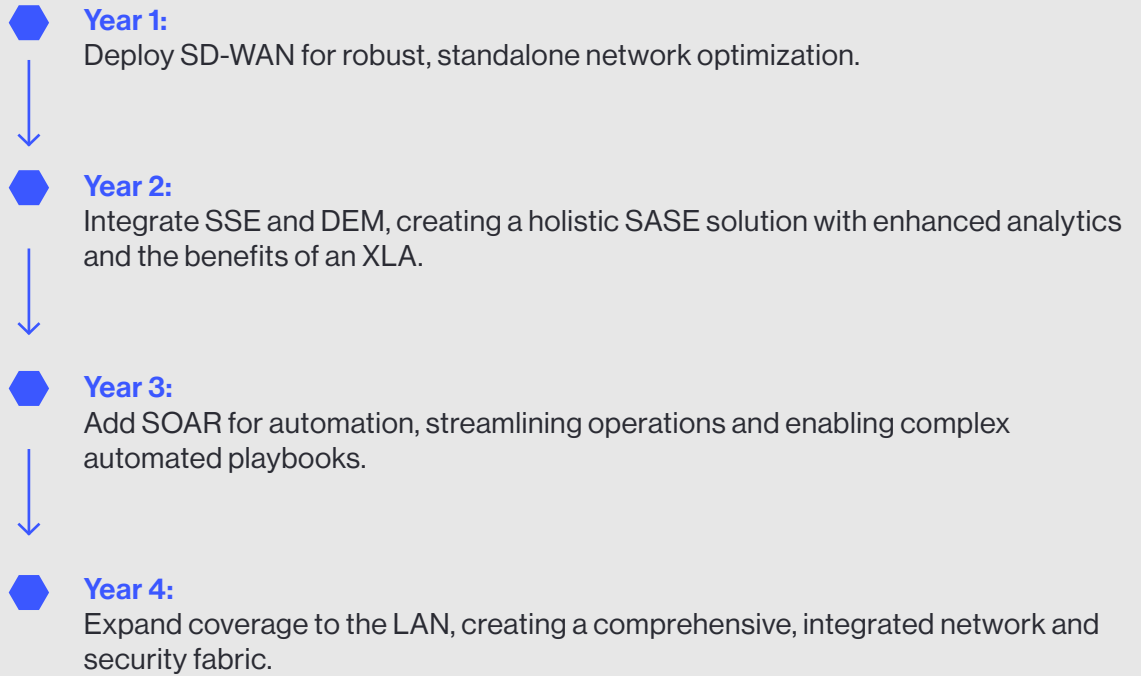

Enhanced Security:

Improved data and analytics strengthen your overall security posture.

Workforce Flexibility:

Secure network access from anywhere, on any device, empowering your mobile workforce.

EXAMPLE GNSX EVOLUTION:

GNSX empowers you to build a secure, flexible, and cost-effective network and security solution tailored to your specific requirements.
