LEGAL

SECURING YOUR DATA WHEREVER IT IS ACCESSES WITH A HIGH PERFORMANCE GLOBAL NETWORK.

SECURING YOUR LEGAL PRACTICE

Law firms increasingly have staff working remotely or on mobile devices. Traditional security models often struggle to consistently secure access for these remote users, leading to vulnerabilities. GCX SASE enforces Zero Trust Network Access (ZTNA). This means it constantly verifies the identity and security posture of every user and device each time they try to access applications and data, regardless of their location. This drastically reduces the risk of unauthorized access from compromised remote devices or accounts, ensuring sensitive client data remains protected even when accessed outside the traditional office perimeter.

Further, GCX SASE includes Data Loss Prevention (DLP) which monitors and controls sensitive data, preventing it from leaving the organization's control without proper authorization. This is critical for maintaining client confidentiality and meeting ethical and regulatory obligations

DELIVERING AND PROVING PRACTICE

Designed with compliance in mind. GCX SASE provides comprehensive logging, reporting, and auditing features that assist legal practices in demonstrating adherence to relevant regulations. This simplifies compliance audits and reduces the risk of regulatory penalties.

THE GCX SUITE SUPPORTING GLOBAL LEGAL PRACTICES

Our SASE solution converges multiple security functions into a single, integrated cloud platform. This significantly simplifies the security infrastructure, reduces costs and management overhead for IT teams, and improves overall security effectiveness by eliminating complexity and improving visibility. This is further enhanced when underpinned by GCX networking solutions which are available globally and deliver high quality networks to sites all over the world – ensuring 24x7 network performance and introducing a powerful suite of visibility, control and performance to both the network and security layers delivering a powerful analytics suite to pinpoint user issues and deliver security compliance user by user, second by second, thus, securing corporate data wherever it is accessed and delivering powerful performance to employees wherever they are located.

THE GCX DIFFERENCE

With over 30 years of experience, our mission is to securely connect users and devices to core business applications over our SASE-enabled global network.
Our people bring the human touch to our solutions, ensuring transparency, integrity and respect in everything we do. We take ownership of problems and work to prevent recurrence, driving continuous improvement across our operations to provide a high level of customer and user experience. We invest in growth through our people, partnerships, products and tools to deliver best-in-class solutions and services.
