

SECURE YOUR GLOBAL ENTERPRISE WITH GCX'S MANAGED SASE SOLUTION

UNIFY YOUR NETWORK AND SECURITY FOR A SEAMLESS, SECURE, AND AGILE FUTURE

In today's dynamic digital landscape, your business demands seamless connectivity, robust security, and agile scalability. GCX's Managed Secure Access Service Edge (SASE) solution empowers your global enterprise to thrive by converging network and security functions into a single, cloud-delivered platform.

THE CHALLENGE:

Traditional network and security architectures struggle to keep pace with the demands of a distributed workforce, accessing cloud services, on a range of devices whilst battling evolving cyber threats. Managing disparate point network and security solutions is complex, costly, and often leads to security gaps and performance bottlenecks. Your workforce needs the best possible experience wherever they work from – in the office, at home or on the move; likewise, you need secure, high performing networks to keep your business moving.

OUR SOLUTION:

MANAGED SASE - A COMPREHENSIVE APPROACH TO SECURE CONNECTIVITY

GCX's Managed SASE solution simplifies your IT landscape while enhancing security and performance. We provide a unified platform that has all use cases covered - encompassing users, branch sites and datacentres with a single powerful security and performance solution integrating:

SD-WAN

Optimize network traffic routing, improve application performance, and reduce WAN costs with intelligent, software-defined networking. Backed by our global footprint and range of access products and innovative CPE designs, we can deliver powerful SD-WAN solutions anywhere.

Zero Trust Network Access (ZTNA)

Enforce granular access control based on user identity and context, ensuring only authorized users can access specific resources.

Secure Web Gateway (SWG)

Protect your users and data from web-based threats with advanced threat prevention, URL filtering, and content inspection.

Cloud Access Security Broker (CASB)

Gain visibility and control over your cloud applications, prevent data leakage, and ensure compliance with security policies.

Firewall as a Service (FWaaS)

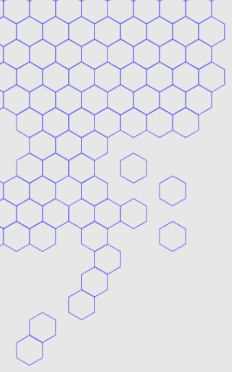

Protect your network perimeter with next-generation firewall capabilities, including intrusion prevention, application control, and advanced threat defence.

Data Loss Prevention (DLP)

Monitoring, detecting and blocking potential data exfiltration activities from your network, keeping your data safe.

Remote Browser Isolation (RBI)

By delivering a stream of a webpage or app and not the active content to a device, the user's experience is unaffected, and hidden malicious code can't reach them.

KEY BENEFITS:

Enhanced Security:

Protect your organization from evolving cyber threats with a comprehensive suite of integrated security services avoiding a stack of point products with functional overlap that may not be aligned. Further, this consolidation of network and security products has been proven to reduce IT infrastructure costs by avoiding paying for functionality overlaps.

Simplified Management:

Manage your entire network through a single, intuitive platform, streamlining operations and reducing administrative overhead.

Improved Performance:

Optimize network traffic and application performance with intelligent SD-WAN routing and cloud-based security services.

Increased Agility:

Scale your network and security resources quickly and easily to meet the changing needs of your business.

Seamless Integration:

with your existing infrastructure. This approach eliminates the need for costly hardware replacements and offers flexibility to transform your network supporting diverse connection types, from cable, LTE, and Satellite.

Global Reach:

Leverage our expansive network with over 250 locations worldwide, ensuring high performance, secure solutions irrespective of geographical boundaries.

GNSX – DELIVERING ANALYTICS AND AUTOMATION TO SASE:

SASE forms a key module in our Global Network Security Experience (GNSX) suite of solutions. The GNSX suite covers networking and security from user and device through security and analytics into automation and SOAR capability. Each solutions selected operates either as a standalone solution, or can be integrated with other modules to form part of a GNSX stack. the power of the stack lies in a cohesive suite of interlocking solutions with enhanced data and analytics making security much stronger and saving costs by reducing overlaps of functionality between your existing solutions.

GNSX is based on 3 different OEM vendor stacks and there's no need for product modules to be purchased at the same time – GNSX has the power to combine every component whilst providing a secure network fabric managed via single pane of glass for visibility, analytics, and reporting - all backed by a global experience level agreement (XLA).

WHY CHOOSE GCX?

Expertise:

Our team of certified network and security experts have a proven track record in designing, deploying, and managing your SASE solution, ensuring optimal performance and security. Backed by a portfolio of success stories and testimonials from satisfied clients.

Global Infrastructure:

We leverage our global network to deliver low-latency connectivity and consistent security for your users worldwide.

Flexible Solutions:

We offer customized SASE solutions tailored to your specific business requirements and budget.

24/7 Support:

Our dedicated support team is available around the clock to assist you with any questions or issues.

TAKE THE NEXT STEP:

Transform your network and security with GCX's Managed SASE solution. Contact us today for a free consultation and learn how we can help you achieve your business objectives.
