

# GCX SECURE SERVICE EDGE (SSE): YOUR GATEWAY TO A SECURE DIGITAL FUTURE

## UNIFY YOUR NETWORK AND SECURITY FOR A SEAMLESS, SECURE, AND AGILE FUTURE

In today's dynamic digital landscape, your business demands seamless connectivity, robust security, and agile scalability. GCX's Managed Secure Service Edge (SSE) solution empowers your global enterprise to thrive by delivering a comprehensive and integrated suite of security products, regardless of device or location.

## THE CHALLENGE:

Traditional network and security architectures struggle to keep pace with the demands of a distributed workforce, accessing cloud services, on a range of devices whilst battling evolving cyber threats. Managing disparate point network and security solutions is complex, costly, and often leads to security gaps and performance bottlenecks. Your workforce needs the best possible experience wherever they work from – in the office, at home or on the move; likewise, you need secure, high performing networks to keep your business moving.

## WHAT IS SSE?

SSE is a cloud-delivered security “overlay” architecture that converges multiple security functions into a single, unified platform. This approach simplifies security management, improves threat detection and prevention, and enhances compliance posture. SSE can act as a simple first step towards a transformation to a full SASE architecture.

## **OUR SOLUTION: A COMPREHENSIVE APPROACH TO SECURE CONNECTIVITY**

GCX's Managed SSE solution incorporates the following key components:

---

### **Zero Trust Network Access (ZTNA)**

Enforce granular access control based on user identity and context, ensuring only authorized users can access specific resources.

---

### **Secure Web Gateway (SWG)**

Protect your users and data from web-based threats with advanced threat prevention, URL filtering, and content inspection.

---

### **Cloud Access Security Broker (CASB)**

Gain visibility and control over your cloud applications, prevent data leakage, and ensure compliance with security policies.

---

### **Firewall as a Service (FWaaS)**

Protect your network perimeter with next-generation firewall capabilities, including intrusion prevention, application control, and advanced threat defence.

---

### **Data Loss Prevention (DLP)**

Monitoring, detecting and blocking potential data exfiltration activities from your network, keeping your data safe.

---

### **Remote Browser Isolation (RBI)**

By delivering a stream of a webpage or app and not the active content to a device, the user's experience is unaffected, and hidden malicious code can't reach them.

---

## **KEY BENEFITS OF GCX SSE:**

### **Enhanced Security:**

Protect your organization from evolving cyber threats with a comprehensive suite of integrated security services.

### **Ease of Deployment and Scalability:**

Our SSE solutions can be deployed enterprise wide, within minutes scaling your network and security resources quickly and easily to meet the changing needs of your business.

### **Simplified Management:**

Streamline your IT operations with a single, cloud-managed platform that eliminates the complexity of managing multiple point solutions.

### **Improved User Experience:**

Seamless and secure access to applications and data, regardless of location.

### **Global Reach:**

Ensure consistent security and performance for your users and applications, regardless of location.

### **Network Integration:**

Our SSE overlays can easily be deployed with existing or new network underlays either deployed by GCX or other suppliers.

## **GNSX – DELIVERING ANALYTICS AND AUTOMATION TO SSE:**

SSE forms a key module in our Global Network Security Experience (GNSX) suite of solutions. The GNSX suite covers networking and security from user and device through security and analytics into automation and SOAR capability. Each solution selected operates either as a standalone solution, or can be integrated with other modules to form part of a GNSX stack. The power of the stack lies in a cohesive suite of interlocking solutions with enhanced data and analytics making security much stronger and saving costs by reducing overlaps of functionality between your existing solutions.

GNSX is based on 3 different OEM vendor stacks and there's no need for product modules to be purchased at the same time – GNSX has the power to combine every component whilst providing a secure network fabric managed via single pane of glass for visibility, analytics, and reporting - all backed by a global experience level agreement (XLA).

## WHY CHOOSE GCX?

### Expertise:

Our team of certified network and security experts will design, deploy, and manage your SSE solution, ensuring optimal performance and security.

### Global Infrastructure:

We leverage our global network to deliver low-latency connectivity and consistent security for your users worldwide.

### Flexible Solutions:

We offer customized SSE solutions tailored to your specific business requirements and budget.

### 24/7 Support:

Our dedicated support team is available around the clock to assist you with any questions or issues

## TAKE THE NEXT STEP:

Transform your network security with GCX's Managed SSE solution. Contact us today for a free consultation and learn how we can help you achieve your business objectives.
